

Mount a presentation disc on a Pre-Motion turntable

Guideline for mounting a presentation disc on your turntable

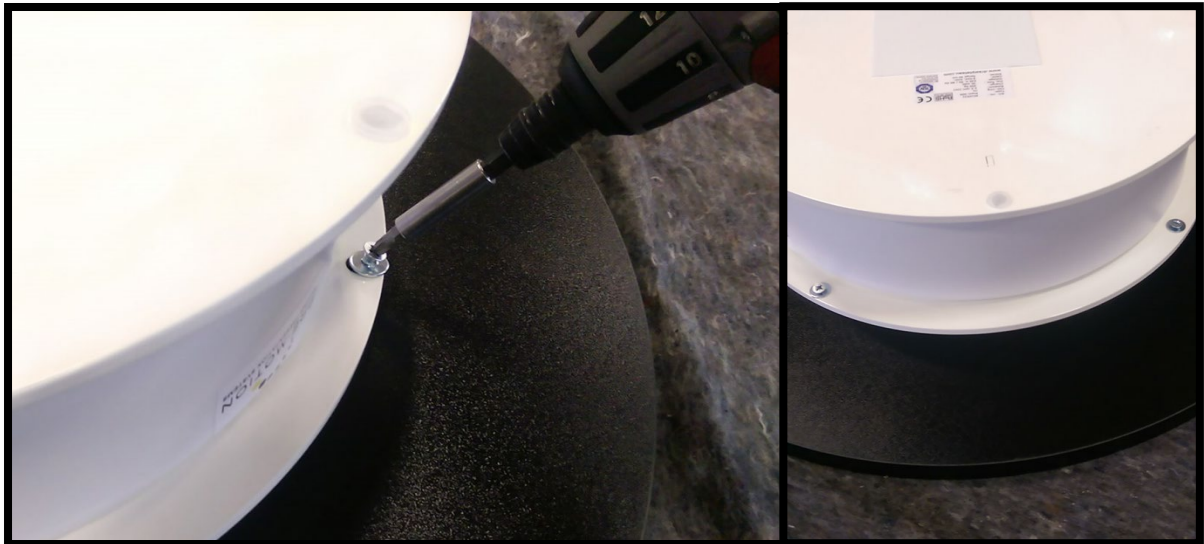

Step 1: Check whether you have all the following items in front of you

- Turntable
- Presentation disc
- Small plastic bag with 6 screws + 6 rings
- Screwdriver
- Cloth or other clean subsurface on which you can safely place the presentation disc upside down. A (soft) cloth prevents the top of the presentation disc from potential damage.

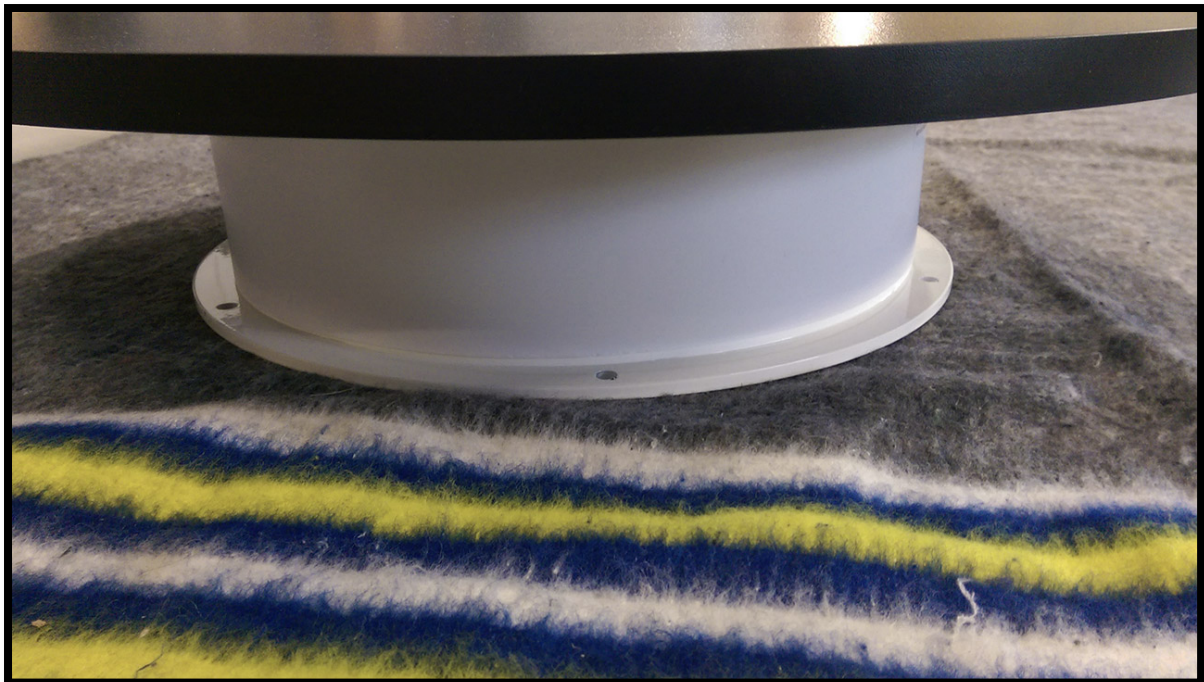

Step 2: Placing the turntable (upside down) on the (already upturned) presentation disc

Put the turntable upside down on the presentation disc. Move the turntable in the correct position: with the holes in the outer edge right above the holes in the presentation disc. The turntable is then centered exactly in the middle of the disc. If you have a turntable with a revolving power source, you need to make sure that its wire falls into the slot of the presentation disc.

Step 3: Turn the screws into the presentation disc

Please make sure that you cover each hole with a ring before you start screwing.

Step 4: Turn the turntable with presentation disc around

When the presentation disc has been mounted tot the turntable securely, you can carry the combination (carefully) to the desired location.

Questions?

If you have any queries regarding mounting a presentation disc on a turntable, please feel free to contact our support team. Please send your question(s) to info@pre-motion.nl, or contact us during working hours via +31 (0)318 505780.
